SQL

SQL is a standard language for storing, manipulating and retrieving data in databases. It is used to create and manage the database structure and to perform operations on the data stored within the database. SQL is a declarative language, meaning that you describe what you want, not how to get it. It is used in a wide range of applications, from simple data storage to complex data analysis and reporting.

Data Visualization

Data visualization is the process of representing data in a graphical format. It is used to make data easier to understand and to identify patterns and trends. There are many different types of data visualization, including bar charts, line graphs, pie charts, and scatter plots. Each type of visualization is suited to different types of data and different purposes. Data visualization is an essential tool for data analysis and reporting.

Info & Web Techonology

Information technology (IT) is the use of computers and other electronic devices to store, retrieve, and communicate information. It is a broad field that encompasses a wide range of technologies, including hardware, software, and networks. IT is used in a wide range of applications, from simple data storage to complex data analysis and reporting. IT is an essential tool for businesses and organizations of all sizes.

Business Analytics

Business analytics is the process of using data to make business decisions. It involves the collection, analysis, and interpretation of data to identify patterns and trends. Business analytics is used in a wide range of applications, from simple data storage to complex data analysis and reporting. Business analytics is an essential tool for businesses and organizations of all sizes.
